

I am a long haul truck driver and have XM Sat radio installed in my truck. I use it for weather updates and for traffic updates in the large cities. It is much more up to date and reliable than the local, over the air, broadcasts. Besides, I don't have to search for a local station that may, or may not, give me relevant information in a timely manner. This allows me to reroute to avoid traffic jams or bad weather.  
Thank you.
